The new LANCOM 730-4G: A retrofit 4G backup

[Download PDF](#)

Aachen, August 10, 2017—LANCOM Systems, the leading German manufacturer of networking solutions for business customers and the public sector, extends its range of LTE/4G cellular routers with a new 700-series device. The LANCOM 730-4G supplements your network infrastructures with LTE/4G. In combination with LANCOM routers, this is ideal for intelligent backup scenarios.

The cellular router has an integrated LTE/4G modem with 2G/3G support and provides a wireless broadband connection at speeds of up to 100 Mbps. Power can be supplied via a Gigabit Ethernet connection with Power over Ethernet support (PoE as per IEEE 802.3at). Consequently, the device can be positioned to take direct advantage of the best available cellular signal without expensive cabling for the power supply or for external LTE/4G antennas; these would otherwise have to be installed from the server room or 19" cabinet, for example. Alternatively, the device operates with the standard power supply unit shipped with it.

Full integration into the R&S®LANCOM Management Cloud

Like all current LANCOM devices, the 730-4G is optionally managed either with the conventional LANCOM management tools or from the R&S®LANCOM Management Cloud (R&S®LMC). The R&S®LANCOM Management Cloud is the world's first management system to employ Software-defined Networking technologies (SDN) for the intelligent orchestration, optimization and control of your entire network (SD-WAN, SD-LAN and SD-WLAN). This greatly simplifies the management of installations of any scale, from small to very large.

Security Made in Germany

LANCOM offers maximum security "Made in Germany". Like all R&S®LANCOM routers and

gateways, the LANCOM 730-4G is developed and manufactured in Germany and is based on LANCOM's own operating system, LCOS. LCOS regularly receives free updates and is extremely resistant to cyber-attacks. This guarantees a long service life while staying technically up to date, which represents a true protection of your investment.

Further information on the LANCOM 730-4G is available on the LANCOM website:

Rohde & Schwarz Networks and Cybersecurity background:

Rohde & Schwarz Networks and Cybersecurity GmbH is the leading German manufacturer of networking solutions for business customers and the public sector. LANCOM offers professional users secure, reliable and future-proof infrastructure solutions for local-area and multi-site networks (WAN, LAN, WLAN), as well as centralized network management based on software-defined networking technologies (SD-WAN, SD-LAN, SD-WLAN). The LANCOM routers, gateways and WLAN solutions are developed and manufactured in Germany, and a selection of the VPN portfolio is certified by the German Federal Office for Information Security (BSI) for the protection of particularly sensitive networks and critical infrastructures (EPCIP). Rohde & Schwarz Networks and Cybersecurity has its headquarters in Würselen near Aachen, Germany. Customers include small and medium-sized enterprises, government agencies, institutions, and major corporations from Germany, Europe and, increasingly, worldwide.
