

Information security officially confirmed: LANCOM Systems receives ISO/IEC 27001 certification

07/10/2024

Aachen, 10, July 2024—The German network-infrastructure and security supplier LANCOM Systems now has an information security management system (ISMS) that is certified according to the internationally recognized standard ISO/IEC 27001. The certification covers both the LANCOM Management Cloud and all processes in Service & Support. This further underlines LANCOM's ongoing commitment to the highest standards in cybersecurity and data protection.

ISO/IEC 27001 is a globally recognized standard for information security management systems. It provides companies with clear guidelines for planning, implementing, monitoring, and improving their information security.

To formally confirm its commitment to the security, integrity, and availability of its own IT systems and the best possible protection of customer and partner data, LANCOM has undergone an official audit of its internal processes. The information security management for the R&S@LANCOM Management Cloud and for the processes in Service and Support was tested and certified by TÜV Rheinland in accordance with the ISO/IEC 27001 standard.

Objective evidence of data and cybersecurity

This gives LANCOM customers and partners objective proof that their data is processed in accordance with the highest standards for security and data protection, that risks to the integrity and availability of IT systems are minimized, and that potential security incidents are handled quickly and effectively.

LANCOM founder and managing director Ralf Koenzen: *"In an increasingly networked and digitalized world, information security is becoming a crucial factor. For LANCOM Systems, protecting our company and therefore also our customers and partners and their data is our highest priority. We take this responsibility very seriously. That is why we have put our processes to the test and are very pleased about the successful audit and the ISO/IEC 27001 certification."*

Further information on ISO/IEC 27001 certification is available on the [LANCOM website](#) and on the [website of the BSI](#) (German Federal Office for Information Security).

About Rohde & Schwarz Networks and Cybersecurity

Rohde & Schwarz Networks and Cybersecurity GmbH is a leading European manufacturer of network and security solutions for business and the public sector. The portfolio includes hardware (WAN, LAN, WLAN, firewalls), virtual network components, cloud-based software-defined networking (SDN), and solutions for remote and mobile access.

Software and hardware development as well as manufacturing take place mainly in Germany, as does the hosting of the network management. There is a strong focus on trustworthiness and security. The company is committed to products that are free from backdoors and is a holder of the trust mark "IT Security Made in Germany" as initiated by the German Ministry of Economics.

LANCOM was founded in 2002 and has its headquarters in Würselen near Aachen, Germany. Customers include SMEs, government agencies, institutions, and major corporations from all over the world. The company is a wholly owned subsidiary of the Munich-based technology group Rohde & Schwarz.
